Description

Example

Questions for Dr. Hofmann about Example:
- Could we do a discrete scale that is the same for all years? May be hard since the population increases over time, but it would allow us to compare charts across years. - Years comparing 'SLAVES', 'TOTAL.FREE.COLORED.PERSONS', and 'PERC.AFRICAN.AMERICANS.FREE', can we put these next to each other or just look at them individually?

Implementation

Discussion of Future Work
